Practice Quiz, 1 question

✔ **Congratulations! You passed!**

<div style="border:1px solid #1a5dab; padding:10px;">Next Item</div>

✔

1. What is the advantage of putting event-driven components of your application into Cloud Functions?

1 / 1
point

○ Cloud Functions handles scaling these components seamlessly.

Correct
Correct! Your code executes whenever an event triggers it, no matter whether it happens rarely or many times per second. That means you don't have to provision compute resources to handle these operations.

○ Cloud Functions means that processing always happens free of charge.
